

## Permanent Mineral Trust Fund vs Unconstrained Fund

## Objectives \& Constraints

|  | PMTF | Unconstrained Fund |
| :---: | :---: | :---: |
| Investment Objective | - Intergenerational Equity | - Maximize Long-Term Growth |
| Spending Policy | - Corpus cannot be spent. <br> - $5 \%$ of the trailing 5 -year average market value. | - No distributions before a set future date |
| Spending Constraints | - Only income may be spent (i.e. interest payments, dividends, rental income, and net realized gains). <br> Guaranteed spending level: 2.5\% | - NA |
| Reserve Accounts | - Excess income above the spending policy amount is appropriated to the earnings reserve account. <br> - Historically, capped at $150 \%$ of the spending policy amount. Legislation passed in 2023 however calls for permanent fund reserve accounts to be funded and maintain at least 5 (and preferably 7 years) of their respective annual spending obligations (potential obligations from the reserves). <br> - Following the establishment of the new permanent reserve accounts, each Fund will have a different threshold for transferring excess revenues back to permanent fund corpus. <br> - PMTF: revenues in excess of $245 \%$ of spending policy amount. <br> - While Wyoming's permanent funds are constitutionally protected from legislative appropriation, the state's permanent fund reserve accounts are not. | - NA |

## Summary of 2023 Asset Allocation Changes

## Permanent Funds

- New Targets: Consolidate Total Return-Focused and IncomeFocused funds into a single asset allocation strategy.
- Relative to former Total Return Targets:
- Increase growth and private real assets
- Increase illiquid asset targets (private equity, private credit, private infrastructure)

## Wealth Projections

Current PMTF Target vs. Unconstrained Target

- Background
- The following page shows a 20-year range of outcomes ( $10^{\text {th }}$ percentile $90^{\text {th }}$ percentile returns) for a hypothetical portfolio, using the current (new) PMTF target and the unconstrained portfolio consisting of $30 \%$ public equity and $70 \%$ private equity.
- Assumes no cash flows, and is intended to provide an apples to apples comparison of potential investment outcomes under 2 different paradigms (constrained and unconstrained)
